

ATHEER

Engineering the Future of Connectivity

Executive presentation

Integrated technology and engineering capabilities for enterprise and critical infrastructure clients.

Libya-based delivery with regional and international capability perspective.

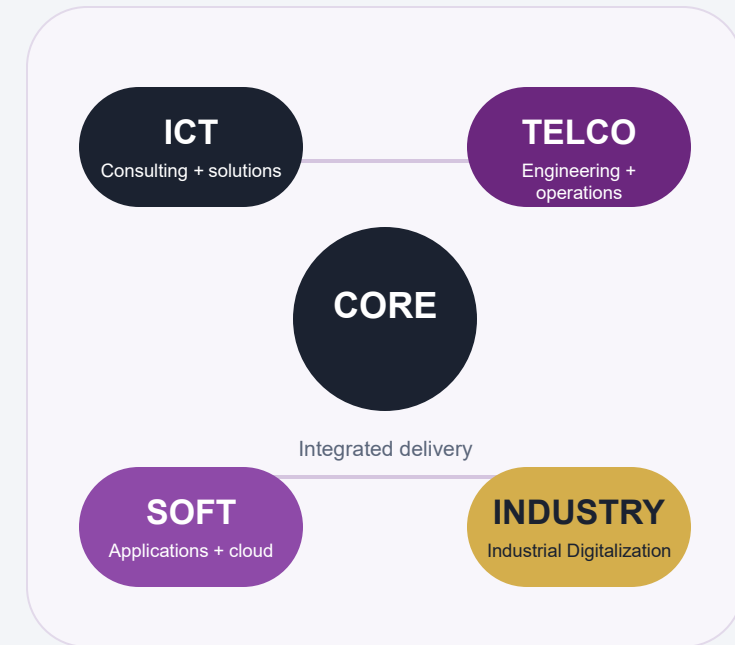

Atheer is a multidisciplinary technology and engineering company

Company overview

Atheer combines advisory, engineering, software, managed services, and sector-oriented enablement in one coordinated operating model.

Management expertise aligns consulting, engineering, software, and operations.

Vision, mission, and values define Atheer's direction

Vision

To be a trusted technology and engineering partner enabling reliable, modern digital infrastructure.

Mission

Deliver technology, telecom, software, and service solutions that improve connectivity, performance, and resilience.

Corporate values

Reliability

Innovation

Integrity

Client focus

Excellence

Capability growth

Consulting and engineering services support planning, governance, and transformation

Advisory domains

ICT consulting

Telecom consulting

Digital transformation

Project management

Technical audits

Advisory architecture

Assess

Current-state review and gap framing.

Design

Future-state architecture and options.

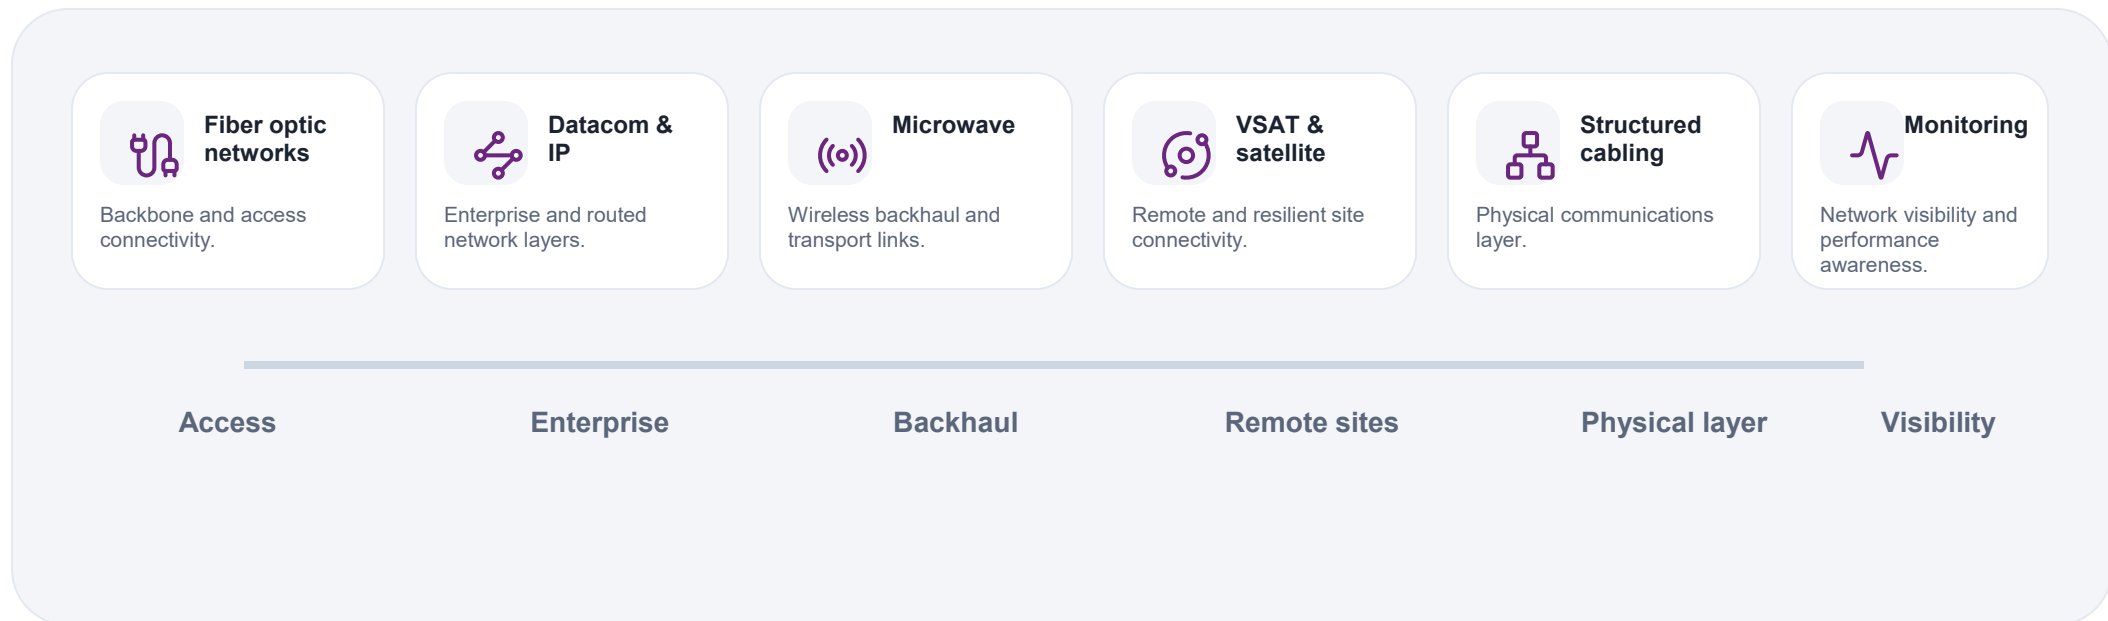

Govern

PMO discipline, control, and oversight.

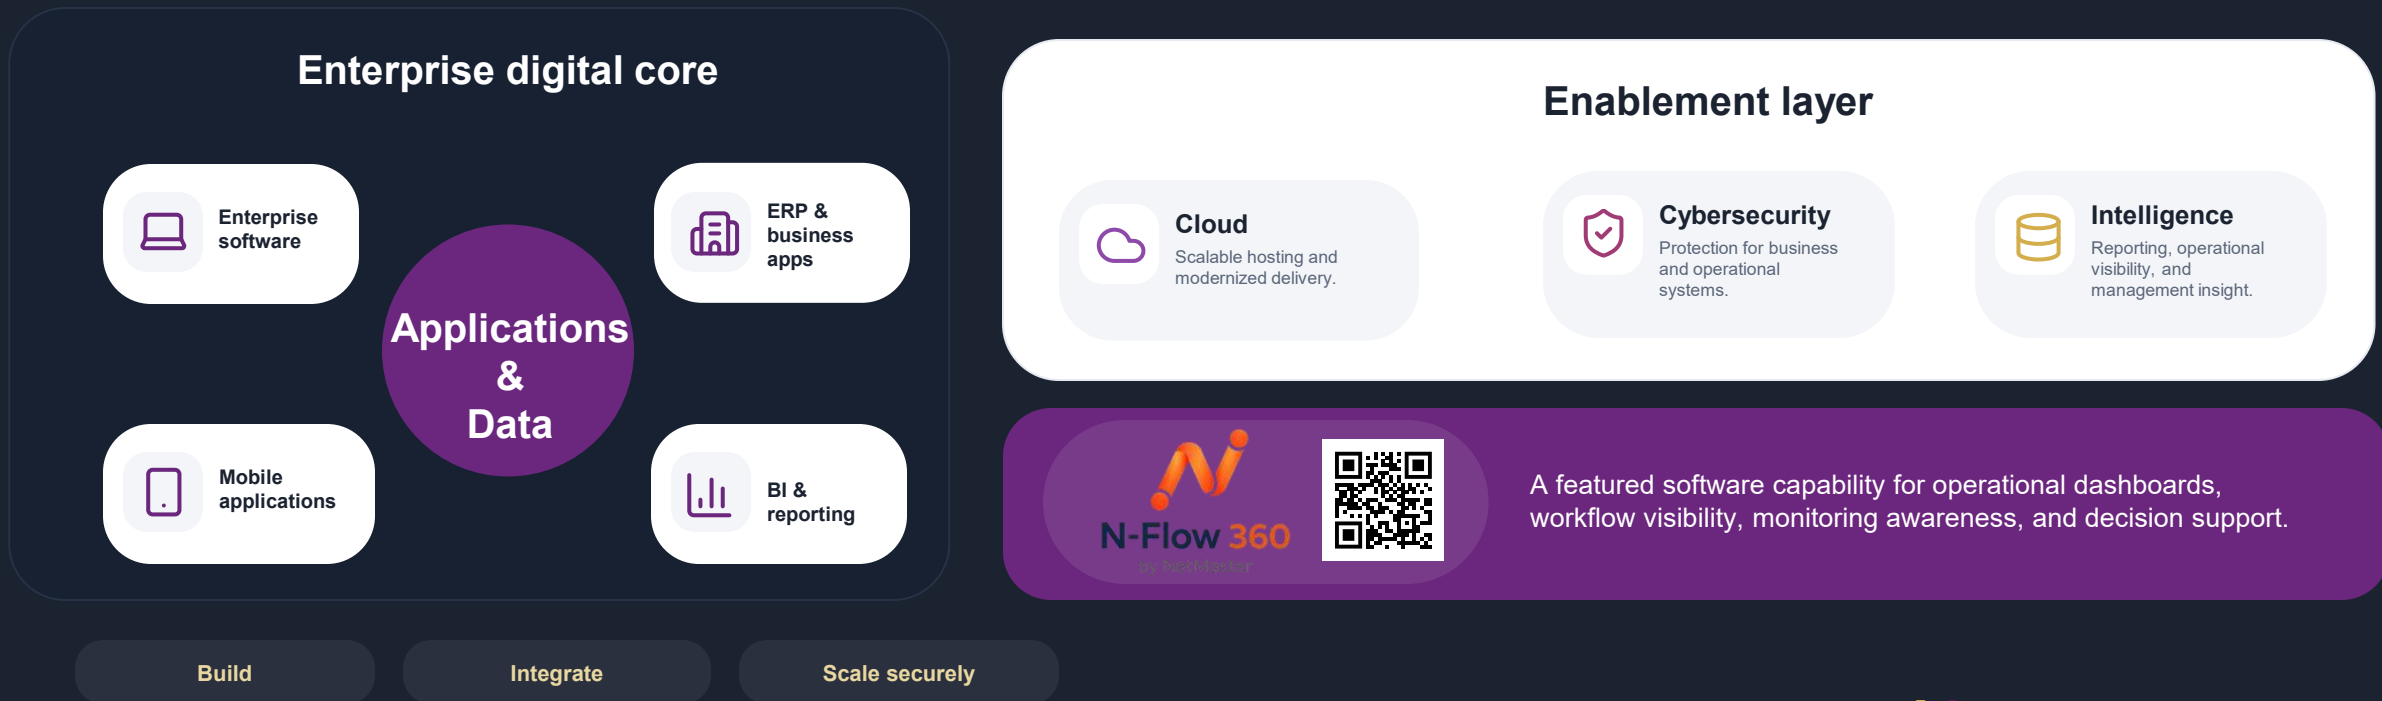

Validate

Audit readiness and technical assurance.

Telecom infrastructure services cover the full network stack

IT and software solutions expand Atheer's digital delivery capability

Training and capacity building strengthen client capability

**Learn**
Technical training and practical skill transfer.

Technical depth

**Validate**
Professional certifications and structured development.

Verified skills

**Lead**
Leadership development for stronger delivery ownership.

Team leadership

**Scale**
Customized corporate programs aligned to business context.

Organizational scale

Focus domains

Telecom engineering

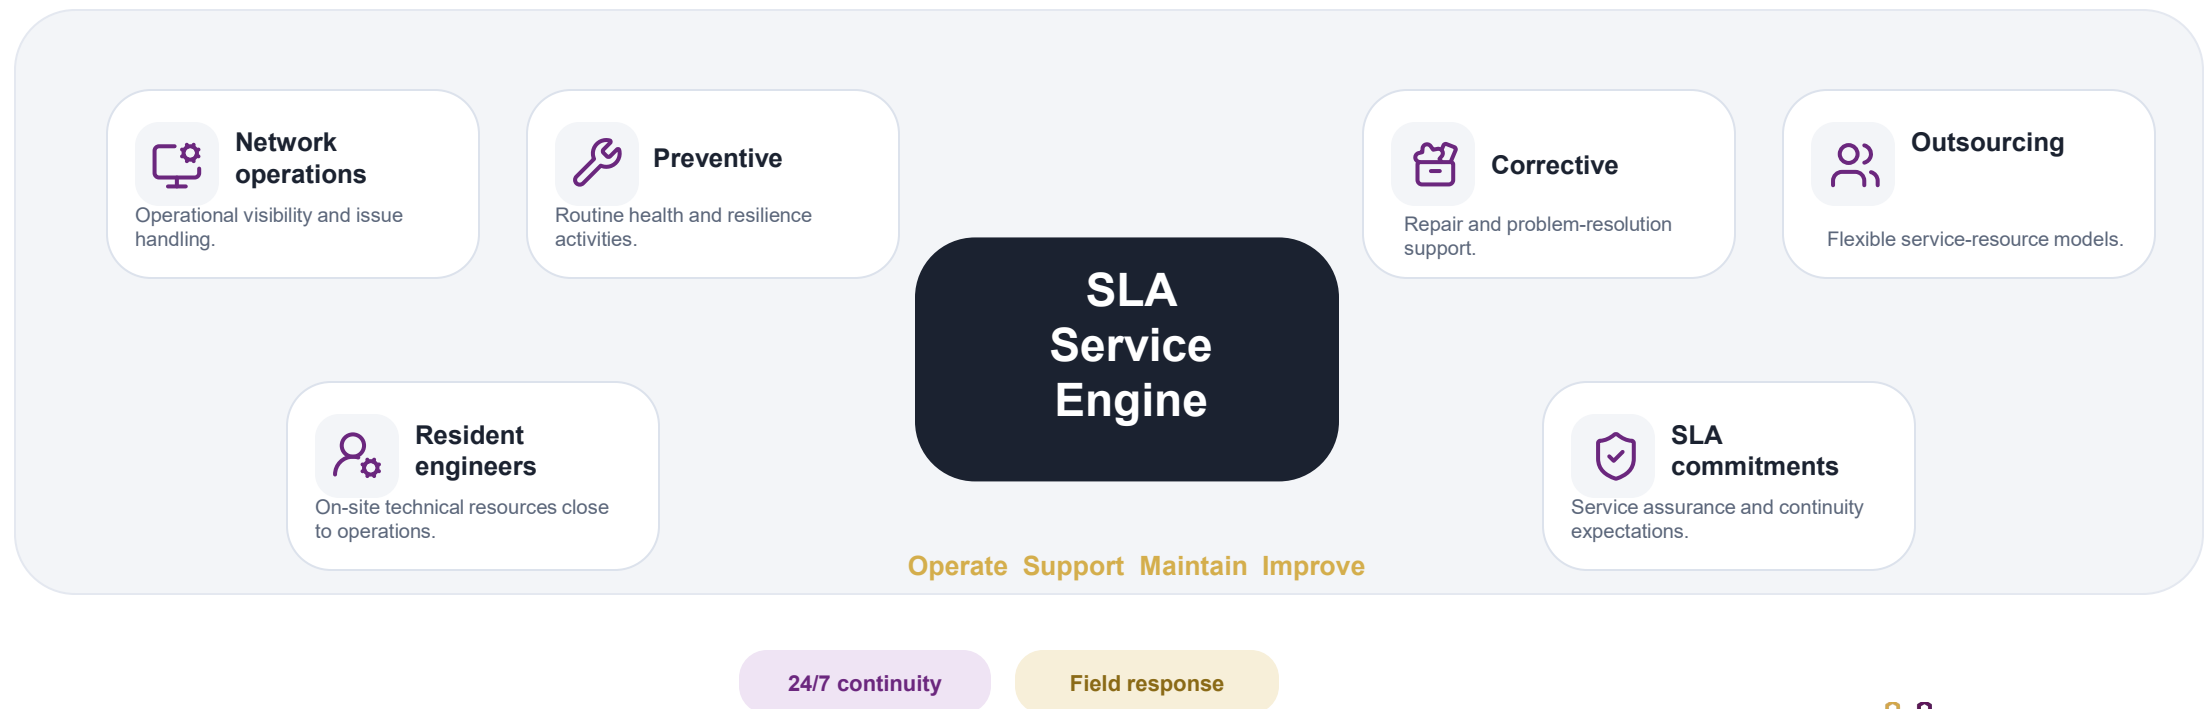

Datacom & IP

Cybersecurity

Digital transformation & IT

Project management & leadership

Managed services provide a clear operational support model

Oil & Gas Solutions

Oil and gas solutions connect field operations, remote sites, control rooms, and digital systems.

The solution architecture supports field communications, OT integration, and digital oilfield enablement.

Field-to-control-room architecture

Field communication networks

Operational communications at remote and active sites.

Remote site connectivity

Resilient reach to distant locations.

OT integration

Technology integration around industrial operations.

Control room connectivity

Visibility and connected command environments.

Digital oilfield enablement

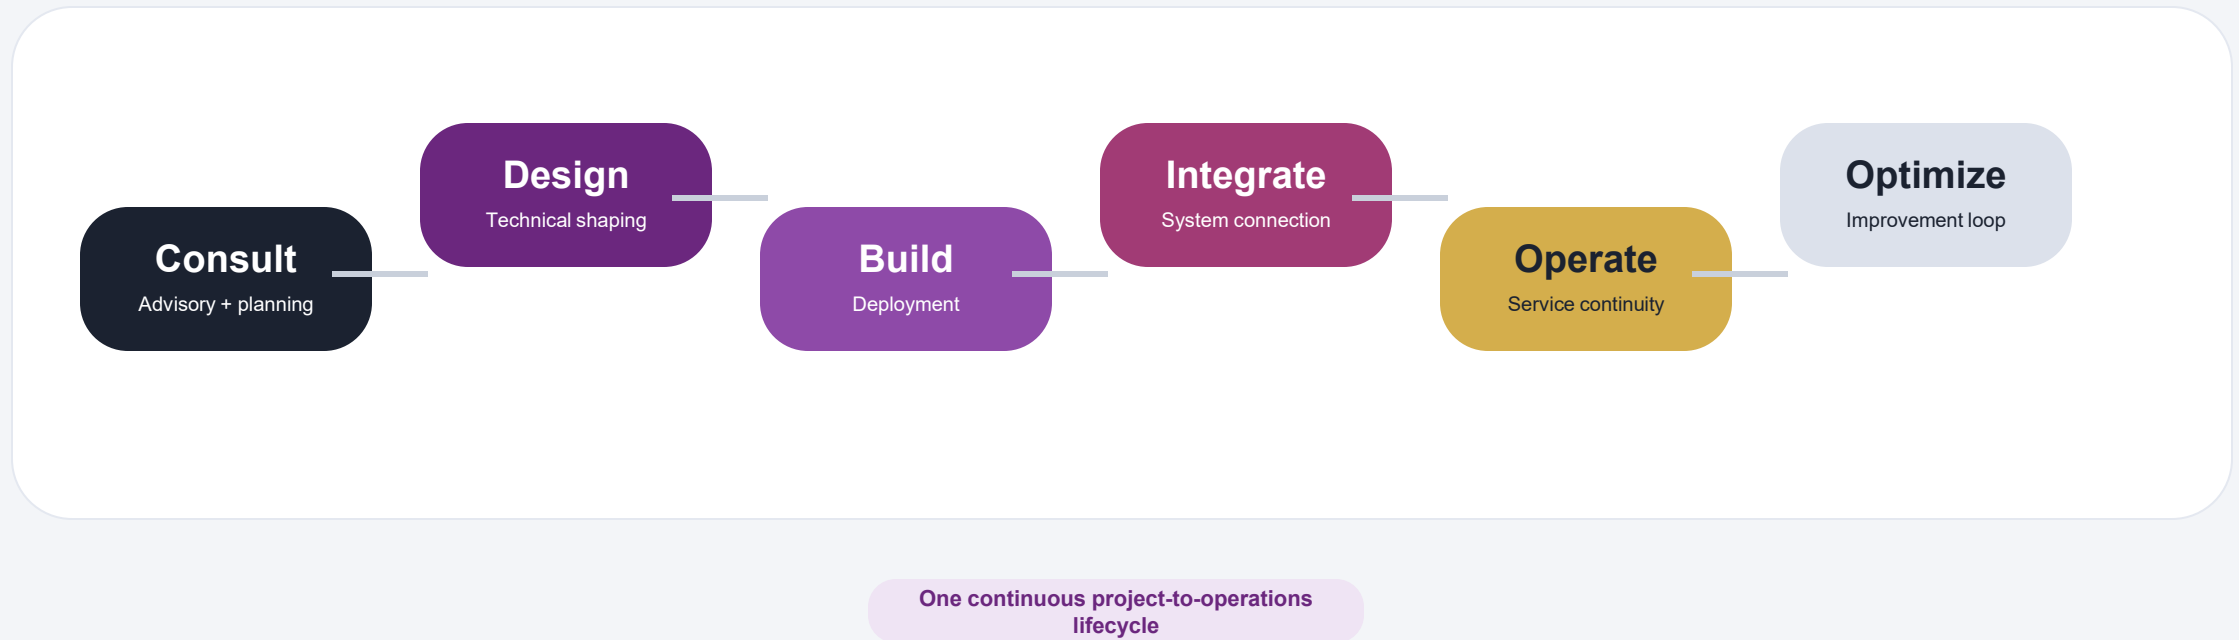

Digitally enabled operations and insight.

Sector value

Atheer supports operational continuity, secure connectivity, and digital enablement for critical energy-sector environments.

Project Delivery Methodology

The delivery methodology follows a six-stage enterprise lifecycle

Why Atheer stands out as a trusted delivery partner

Executive take-away

Atheer combines local reality, broad technical coverage, and delivery discipline in one practical partner profile.

Confidence

Coverage

Execution

Continuity

Local

Presence in Libya

Grounded in local execution context

Regional

Regional and international expertise

Broader engineering perspective

Qualified

Professional capability

Skilled technical and delivery teams

E2E

End-to-end delivery

From advisory through operations

Client take-away

Client confidence

Execution capability

Technology breadth

Sustainable partnership

Together, these strengths position Atheer as a practical partner for continuity, capability, and delivery quality.

Atheer operates within a wider partnership ecosystem

Technology partners

Platforms, products, software, and vendor-aligned solution ecosystems.

Engineering partners

Specialized knowledge, project support, and extended implementation capability.

ATHEER DELIVERY ECOSYSTEM

Strategic value: broader capability, stronger credibility, and more flexible execution options.

Regional delivery network

Reach, coordination, and implementation flexibility beyond one location.

Execution collaboration

Client-facing coordination across solution, engineering, and delivery contributors.
